

# LIFT TRUCK OPERATED WORK PLATFORM APPROVAL SOURCE

*All lift trucks using an elevated platform to lift personnel must be rated for that purpose. If the owner's manual is silent on such use, the Responsible Supervisor must either find out from the manufacturer that it was designed for this use or (where that information is unavailable) obtain a certification by a certified professional engineer that the equipment was so designed. The approval status for each truck used for this purpose must be recorded using this form. The Responsible Supervisor maintains this documentation in their file.*
